Professional Summary

Innovative B.Tech Computer Science and Engineering student (2027 passout) with a strong foundation in Object-Oriented Programming, Data Structures, and Algorithms. Experienced in building highly scalable distributed systems, complex security frameworks, and AI-driven data platforms. Proficient in C/C++, Java, Python and full-stack development. Dedicated to leveraging foundational technologies to build secure, reliable, and high-performance infrastructure for enterprise-scale operations.

Education

Amrita Vishwa Vidyapeetham

B.Tech in Computer Science and Engineering (Core); Current CGPA: 7.6

Coimbatore, India

Aug 2023 – May 2027

Experience

Cybervault

Cyber Security Intern (Blue Team)

Coimbatore, India

Apr 2026 – May 2026

- Audited network infrastructure and conducted defensive security operations utilizing Nmap and Wireshark, identifying 15+ critical vulnerabilities to enhance enterprise security posture.
- Analyzed 10,000+ daily server logs using Splunk for advanced threat detection, reducing potential incident response times by 30% and fortifying robust defensive frameworks.

Technical Skills

Core Concepts: Data Structures, Algorithms, Object-Oriented Programming (OOP), Distributed Systems

Languages: C/C++, Java, Python, JavaScript, Dart

Databases & Cloud: MySQL, MongoDB, PostgreSQL, Firebase, Supabase, Docker, Nginx, Linux, Redis, MinIO, Hugging Face

Web & Mobile: React.js, Node.js, Express.js, HTML, CSS, Flutter

Security & Networking: Wireshark, Nmap, Splunk, Cisco Packet Tracer, Metasploit, Cryptography, NIST Standards

AI & Engineering: PyTorch, TensorFlow, Pandas, NumPy, OpenCV, NLP, Cuda C++, FFmpeg, HLS, CP2K, Streamlit

Projects

BlockDrive 🗄️ | Client | Server | *Python, FastAPI, Docker, Distributed Systems, Hugging Face*

- Architected a highly scalable, zero-knowledge decentralized file storage platform utilizing AES-128 encryption and deployed on Hugging Face, eliminating single points of failure across 5+ fault-tolerant nodes.
- Engineered a custom Proof-of-Work blockchain utilizing SHA-256 hash chaining and Merkle tree validation, guaranteeing 100% tamper-proof metadata management.

VideoDash 2.0 🎥 | *React.js, Node.js, HLS, FFmpeg, BullMQ, MinIO*

- Architected an enterprise-grade adaptive bitrate (ABR) video streaming platform utilizing HTTP Live Streaming (HLS), eliminating legacy mp4 buffering bottlenecks and drastically reducing CDN bandwidth waste.
- Engineered a secure transcoding pipeline using Node.js, BullMQ, and FFmpeg inside isolated Docker volumes, scaling raw media into dynamic multi-resolution segments with AES-128 chunk-level encryption.

mofscreen 🧪 | *Python, PyPI, CP2K, DFT, MPI/OpenMP*

- Developed and actively maintain an open-source Python package on PyPI for the automated Density Functional Theory (DFT) screening of Metal-Organic Frameworks (MOFs) evaluating multi-ion battery anode properties.
- Engineered a high-performance computational pipeline supporting hybrid MPI and OpenMP, automating the extraction of seven key electrochemical metrics (e.g., bandgap, open-circuit voltage) from single CIF files.

ResearchVault 🔒 | *MERN Stack, Secure Web App, Cryptography, NIST Standards, MFA*

- Developed a NIST-compliant secure web application utilizing the MERN stack for universities, streamlining the submission, review, and publication pipeline for 500+ concurrent academic users.
- Enforced rigorous administrative access control by integrating Multi-Factor Authentication (MFA) and hybrid encryption, ensuring zero data compromises for sensitive records.

Dark Money Tracker 🕵️ | *NLP, Python, Streamlit, Financial Intelligence*

- Automated the extraction of financial entities from 10,000+ unstructured DOJ documents by engineering a custom NLP pipeline integrated with a Streamlit GUI, improving analysis speed by 40%.

FacialNet 🗑️ | *PyTorch, ResNet, DenseNet, Deep Learning, OpenCV*

- Engineered an advanced facial emotion recognition system utilizing deep learning architectures (ResNet, DenseNet) trained on the 30,000+ image FER2013 dataset.

AmritaFind | *Flutter, Firebase, Dart*

- Developed a highly functional mobile application with a robust backend architecture for managing and tracking lost and found items across the university campus.

Awards & Achievements

Tensor Club LLM Performance Prediction: 3rd Place. Optimized AI models for predicting large language model performance.

Bootstrap '25 Defang.io Hackathon: 3rd Place. Developed a scalable AI-powered Personalized Learning Management System.

Uyir Hackathon Finalist: Engineered an AI-powered SOS system for autonomous vehicles.

ISRO Bharatiya Antariksh Hackathon 2025: Competitor with Team Luminarc AI.
